

What if . . . ?

There was a fly product that REALLY worked? That didn't involve messy, sticky creams or sprays designed specifically to make spooky horses climb the walls? What if it worked from the INSIDE, OUT? And just by adding 100g a day to your horse's feed, you could eliminate fly nuisance forever?

Think Fly is a tasty blend of herbs, minerals, essential oils and natural trace elements which work their way through the body's system to create an invisible barrier against biting and bothering flies and midges. Just add to the daily feed. While some horses will notice an immediate difference, please allow up to two weeks for full effects to be felt and noticed. In times of increased fly pressure, simply increase dosage. It is important to note that horses who are not bothered by flies can maintain or gain weight, so monitor feed accordingly.

Welcome to the equestrian revolution! This unique, all-natural product (no nasty chemicals or drugs) is manufactured in the UK to strict Australian Quarantine Inspection Services (AQIS) standards and imported especially for you and your horse by Global Horse Products.

*Only the best products
for you and your
horse from every far flung
corner of the globe.*
